

## 0-10V Driver

The eldoLED 0-10 dimmer is a control device used to adjust the brightness of dimmable lighting systems that utilises the 0-10V dimming protocol. By operating the dimmer, you can smoothly adjust the lighting from 0 to 10 volts. This allows you to customise the ambiance and energy consumption in a space according to your needs. This dimmer is suitable for all Heracleum III Lights, Raimond II variants R43, R61, R89, Dome, and Zafu, and the Flock of Light 31.
